**Figure 2.** Step-care management of atopic dermatitis (AD).\(^1\)\(^2\) \(^3\)\(^4\)\(^5\)\(^6\)\(^7\)\(^8\)\(^9\)\(^10\)\(^11\) Not approved by the Food and Drug Administration to treat AD. \(^1\) Approved by the Food and Drug Administration to treat AD but not recommended for long-term maintenance. A short course of systemic corticosteroids can help resolve severe symptoms, but exacerbation at discontinuation is common. Systemic corticosteroids also can be used as cotreatment during the initiation and optimization of phototherapy, other systemic immunosuppressants, or dupilumab. TCI, topical calcineurin inhibitor; TCS, topical corticosteroid; Tx, treatment.
